

# **SYNORIX (SNRX) LITEPAPER v1.0**

**"Sound Money, Made Practical and Sustainable"**

## **1. The Vision**

**Synorix (SNRX) is a decentralized Value Distribution Layer built upon the battle-tested foundation of Bitcoin. It is designed to solve the practical limitations of legacy blockchains—slow confirmation times and network congestion—while introducing a self-sustaining ecosystem funded by an automated, on-chain Treasury.**

## **2. The Core Problem & Solution**

**While Bitcoin proved the viability of decentralized sound money, its 10-minute block times and limited block size make it inefficient for rapid, everyday scaling. Furthermore, traditional networks rely solely on miner fees, offering no built-in mechanism to fund ecosystem growth or liquidity. Synorix solves this by:**

- **Speed & Scale: Quadrupling the block speed (2.5 minutes) and expanding the block size (8 MB) for high-throughput capability.**
- **The Treasury Mechanism: Routing a predefined percentage of network value into a transparent, community-governed Treasury to fund liquidity, token burns, and development.**

## **3. Key Tokenomics**

- **Ticker: SNRX**
- **Total Supply: 21,000,000 SNRX (Hard Capped)**
- **Launch Model: 100% Fair Launch (No Premine, No ICO, No Team Allocation)**
- **Block Time: 2.5 Minutes**
- **Block Reward: 50 SNRX**
- **Halving Schedule: Every 840,000 blocks (~4 Years)**

## **4. Roadmap**

- **April 10, 2026: Official Testnet Launch & Desktop Wallet Release.**
- **Q3 2026: Mainnet Genesis Block & Public Mining Activation.**

- **Q4 2026: Treasury Activation & First Automated Buyback/Burn Event.**
- **2027+: Tier-1 Exchange Listings and Layer-2 (Lightning) Integrations.**
